Children

`props.children`

Children is a built-in feature of react which can be used to render/reference the JSX tags within a component's tag definition (works only on non self-closing tags)

Children

```
<Modal close={this.props.someFunction}>
  <p>HI</p>
  <strong>There</strong>
</Modal>
```

…. Modal Component:

```
class Modal extends React.Component {
    render() {
        <main>
            <button onClick={()=>this.props.close()}>
            {this.props.children}
        </main>
    }
}
```
